

Overhead & floor conveyors - worldwide leading supplier.

AUTOMATION ENGINEER FOR HOME & ABROAD ASSIGNMENTS

Are you passionate about programming and automation? Join our international company specializing in customer-specific transport systems for surface treatment, assembly, and automation industries. We're offering a unique opportunity for individuals who want to be involved in the entire life cycle of our conveyor systems, from development to commissioning.

As an Automation Engineer in the Controls department, you'll work alongside 22 dedicated colleagues based in Denmark, UK, and Germany. You'll contribute to new projects and the commissioning of installations worldwide, while staying up to date with the latest technical solutions, products, and standards.

Your responsibilities include:

- developing control system functionality and commissioning conveyor systems globally
- maintaining and updating PLC and HMI/SCADA programs,
- attending internal and external project meetings
- training operators and maintenance personnel
- contributing to standardization efforts, and working as a developer for new functionalities.

We're seeking candidates with an educational background in fields like electrical engineering, automation technology, machining, or similar.

Strong experience in industrial PLC and HMI programming is essential, with a preference for Siemens TIA expertise (experience with Allen-Bradley is a plus).

We value attention to quality, structured work approach, independent problem-solving, and flexibility in handling various tasks.

At our company, you'll find a responsible and challenging role in a rapidly growing international organization, collaborating with major industrial companies. You'll have significant liberty to shape your own workday.

While undertaking commissioning tasks at home or abroad, our office in Redcar, England, will serve as your base. We foster a culture of teamwork and support across departments.

This full-time position comes with an estimated 100-120 travel days per year. We provide a mobile phone, PC, and necessary tools, and your salary will be individually determined based on your experience and qualifications. Additionally, the company offers a pension scheme and profit sharing. You will report to the Controls Manager UK, Richard Ellwood.

To apply, please send your application and CV to:

richard.ellwood@caldan.dk

We review applications continuously without a set deadline.
